ABOUT ME

I am a Computer Systems Engineering student with a background in programming. Passionate about software development and UI/UX design, I'm expanding my skills in web and mobile development. Although new to professional work, I've developed personal projects using React, Node.js, and Android. I am eager to learn and contribute to innovative tech solutions.

Languages: Spanish and English

EDUCATION

Computer Systems Engineering

Instituto Tecnológico de Ciudad Madero (ITCM)

September 2020 - Present

Cd. Madero, Tamps

- **Relevant coursework:** Introduction and OOP with Java, introduction to databases, data structures, Android Studio with Java and Kotlin, Jetpack Compose, implementation of CRUD systems, algorithm design, artificial intelligence.

Programming Technician

CBTis 103

August 2017 - August 2020

Cd. Madero, Tamps

- **Relevant coursework:** Introduction to PSeInt, C#, web development (HTML, CSS), and Android Studio with Java.

SKILLS

Databases: SQL.

Systems and Tools: Git, Linux, Docker.

Programming Languages: Java, Kotlin, TypeScript, Javascript, HTML, CSS.

Frameworks and Libraries: Node.js, Express, Flask, React, Svelte, AstroJS, Vue, REST API.

PROJECTS

SolidKey | TypeScript, Express, React, Git

Developed a secure password management and generation application designed to simplify and enhance user protection for digital accounts. Key features include:

- **Custom password generation:** Implemented a generator that creates passwords based on configurable options such as length and character types.
- **State management with React Context API:** Ensured efficient data handling and a seamless user experience.
- **Token decoding and validation API:** Designed and developed endpoints to ensure the integrity and security of stored passwords.

SmartNote | AstroJS, Flask, WebSocket, Git

Developed an intelligent note-taking application that utilizes real-time AI-powered content classification to enhance user productivity. Key features include:

- **Real-time content classification:** Implemented a neural network model for categorizing notes on the fly as users type.
- **WebSocket integration:** Established seamless communication between the frontend and backend for instant updates.
- **Flask API for AI processing:** Developed a robust backend service using Flask to handle AI-based classification requests.
